

Two product lanes: Privacy section (sealed) — 1:1, E2E groups, Whisper private chat, private calls — and Feature mode (shared) — open-history groups, Communities, Broadcast. Phone-free identity (Buzzio ID + mnemonic). Data is not sold.

1. Sealed delivery path

Ceilings: not Tor anonymity · CF may learn sender at cert verify · brief undelivered queue · Feature mode is separate.

2. Privacy section vs Feature mode

Feature	Mode	Operator content?	History
1-to-1 / Whisper / E2E groups / calls	Sealed	No	Local / expiry / short catch-up
OHG / Communities / Broadcast	Shared	Text: yes (DEKs)	Durable member history

3. Claim vs non-claim

Claim: Signal-class sealed content secrecy + sealed-envelope minimization + phone-free ID + honest shared labels.
Do not claim: Tor anonymity · absolute zero metadata · Feature mode is sealed · published third-party audit (none yet).

4. How to verify + report

Open crypto: github.com/ve-21/buzzio-crypto-open-source !' dart pub get · dart test · dart run example/demo.dart
Checklist: doc.buzzio.dev/03-crypto/how-to-verify/ · Bugs & ideas: forum.buzzio.dev · Disclosure: doc.buzzio.dev/08-support/security-disclosure/
